

CVEN 221 Honors - Homework #1

- 1) For a given gravitation constant (g), create a simple excel spreadsheet to do the following:
 - a. Determine the mass of an object given the weight
 - b. Determine the weight of an object given the mass.

You may check your spreadsheet using the problems in McGraw-Hill Connect.

Note: It would be good to have an option for both metric and US units. Save this spreadsheet as you will need to expand it's capability in future homeworks.
